Abstract: Birds play an important role in ecosystems due to their roles in the food chain, biodiversity, biocontrol and pollination. Bird populations have been slumped drastically in 600 years. For this reason, it is significantly important to record bird species systematically. Kastamonu University Kuzezykent Campus is surrounded by forests. This situation makes the area to an important place for birds. In this study, bird fauna of Kastamonu University Kuzezykent Campus were determined by using direct observations. Study were executed between the years of 2015 – 2017. 32 Bird species were recorded.
